

Shipwrights and agents for best quality synthetic PVC decking

Bigger range of quality decking from Australian synthetic decking pioneers

The Aczel Marine team that pioneered sustainable synthetic teak decking in Australia over the past quarter century, is expanding their range of quality PVC decking, to meet the growing demands of Australian boaties.

Designing and manufacturing synthetic decks from their purpose-built factory on Russell Island in lower Moreton Bay close to Brisbane, the Aczel team has earned a strong reputation as Australia's most experienced synthetic deck designers, builders and installers.

Aczel Marine has added a range of artificial decking to its extensive shipwright business which has served the boating industry in all states for more than 30 years.

Many years of experience, boosted by exposure at Australia's biggest boat shows have convinced Aczel Marine that any product that is indistinguishable from real teak but almost indestructible is assured of a healthy future market. Quality natural teak is almost a thing of the past, with a growing number of countries restricting its import.

Decks designed and made by Aczel Marine are built from fine quality virgin PVC material and are thermally welded, rather than glued, to form synthetic teak boards. Their decks hold their colour and keep their grain longer than others, and are resistant to wear, tear, knocks and scratches.
